Ultrasonic Cutter - Ultrasonic Food Cutting Equipment - Cutting Machine

Ultrasonic cutter can cut different height, different materials, can achieve very high precision product block (sandwich, cake, pie, pizza, etc.), cutting can be automatically cleaned. The same time as

The potential of ultrasonic food cutting equipment depends on the type of food and the amount of cuts to be made. The same time as

The machine is moving using a 6-axis robot control system, which allows the device to perform different shapes and programming actions, and you can use the touch screen to control the cutting behavior. The same time as

Ultrasonic food cutting equipment installed on the ultrasonic knife with the appropriate size and frequency to the food processing. The same time as

In order to optimize its safety function, the machine will be equipped with an infrared light perception system, will provide the product outside the security protection work. The same time as

The computer storage system can manage different modes of operation and select through touch screen control. The same time as

In order to achieve greater speed, reduce the man-made downtime cleaning and maintenance time, the device comes with a cleaning system.

Product Specifications:
The product can handle the maximum size of 600x600mm
Cut type: circle, slice, rectangle, triangle
Maximum effective cutting height: 60mm (90mm optional)
Cutting knife size: 305mm (optional 255mm)
